

Vantage™ controls are Mecho-ready.

Lighting-control and automation specialist Vantage now offers direct control of motorized-shading solutions driven by the **WhisperShade® IQ2® Electronic Drive Unit (EDU)**.

MechoShade Home Systems® partnered with Vantage to equip its project-design and commissioning software. It's called **InFusion Design Center®**—and communicates with our shades using MechoNet. Our MechoNet is the communication protocol built into every IQ2 EDU.

This all means that Vantage controllers offer direct control of IQ2 shades without requiring an external interface, shaving costly expenses from installation. Control is immediate, and can be accessed via mobile devices.

Did you know? Native communication capabilities and simplified wiring make the IQ2 EDU the perfect solution for integrating window coverings into automation projects.
